

GDS Hospitality

Totally Integrated Hospitality Solutions Customised to Your Needs

Hybrex's Hospitality Series

Hybrex's GDS Hospitality Series is a feature-rich platform thoughtfully designed to accommodate as few as 10 rooms to over 600! A single system with multiple integrated solutions means you can say **"goodbye"** to training headaches and servicing various equipment types. Say **"hello"** to a solution that incorporates your desired mix of administrative and guest telephones and the number of outside lines needed for your Hotel. The GDS Hospitality series is the system of choice for small to medium Hotels. On top of that, add seamless integration of front desk and guest features that allow you to offer an unprecedented level of service to all that frequent your Hotel.

The GDS Hospitality Package can be flexibly configured to serve not only your basic telephone needs but also acts as an Automated Attendant, Voice Mail, Front Desk operations, Guest Services, Call Accounting and so much more.

Front Desk Operations

Simple as 1, 2, 3...

Accessing features is a breeze with the GDS, simply press "Hotel" key on the console, followed by 1, 2, 3 etc. for the various features and following the instructions on the LCD display of the operator console, or voice prompts with the addition of the Voice Services Card.

The GDS provides connection & integration to property management applications and your front desk applications allowing seamless control of your hospitality operations.

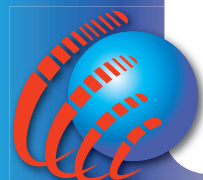

Guest Services

That pay dividends...

When a guest enters the GDS Voice Services Package, they are greeted with a friendly menu of options, not a barrage of confusing instructions.

The system maintains a commitment to user friendliness by offering clear voice guided instructions for using and setting up features. Your guests will be pleased with the services offered, and your staff will be free to deal with other clients.

Guests simply dial a code to enter the Voice Services function and follow the menu.

GDS Hospitality

Totally Integrated Hospitality Solutions Customised to Your Needs

Control your system on the run

Take Control of your Assets

Access Control

With the integrated Hybrex Access Manager, you have full control over building access - proximity cards, swipe cards, auto door openers, open door alarms - you choose the solution, or solutions, that fit your requirements. Hybrex Access Manager lets you easily adjust access control, view reports & trace history by times and cards. *(may require additional equipment)*

Emergencies in Your Business!

*Guest in Trouble? Having a Medical Emergency?
How do you know which guest calls for help?*

GDS has the Solution!

With the latest Hybrex GDS Phone System, your concerns can be eliminated.

When your guest dials 111 (or 911) from the phone in their room, the system will phone the emergency service and play a pre-recorded message. For example: *"There is an emergency at ABC, 123 Main Road, Christchurch. This call is from room 612"* in the background as the guest explains the details. As this message is playing repetitively, a simultaneous call is made to your reception phone so that you know exactly what is happening and can act appropriately.

This software innovation has already proved invaluable in New Zealand and is especially useful if your guests have limited English.
