

Announcing the new  
Hybrex GDS Lockdown Alert  
feature for School Campuses.

## Hybrex Lockdown Alert for School Campuses

At Hybrex we are more frequently hearing reports of School campus Lockdowns, in that they are becoming a regular occurrence worldwide and Australia is no exception to this kind of threat.

Auto Telecom, the manufacturer of the Hybrex system, have developed a new solution for these types of incident - known as the "Lockdown Alert". We have upgraded our systems to provide a specific announcement alert feature that can only be activated from a central point on site. Once the alert has been activated the system will play a pre-recorded message to warn everyone on site of the Lockdown situation. This announcement will be broadcast through the speakers of every handset, and any connected PA points.

Announcement Example:

**"This is a Lockdown Alert, please return to your classrooms and wait for further instructions from a teacher, please remain calm."** (repeated)

Hybrex GDS systems are already highly regarded as a Telephone System and are used worldwide. The Lockdown Alert is a new system feature which has been designed to enhance the Paging capabilities of the system with the Education sector in mind. The Hybrex solution utilizes its own Digital and AH99-PN Analogue handsets, and any other connected PA equipment, to broadcast the Paging Announcement alerts. This solution offers great value by utilizing the one operating system. Another benefit of using the Hybrex GDS system for this and its other features is that only one set of cabling is required thereby eliminating duplication costs.

Existing Public Announcement systems can also be connected to the GDS system to ensure that all areas of the campus are covered in the event of a Lockdown Alert being triggered.

To activate this type of alert you would normally have the one activation point to trigger the alert and then selected people on site would be empowered and know how to deactivate it.
